# The First Problem

- The Total Number of Ballots was 7237
- The Total Number of Votes for President was

7602!!!

So where did the extra 365 votes come from???

# The Second Problem

- I decided the only way I was going to get to the bottom of this, was to count school by school.
- I created an excel worksheet that listed each school, number of votes and ballots.
- Here are the results.....

# The Results for President

- There were 47 schools, with a total of **485** more votes than ballots.
- The worst locations were
- Florida City Elementary #2001 with 93 votes but only 31 ballots (42 Members)
- Everglades K-8 #1721 with 78 votes and only 16 ballots (51 Members)
- Palmetto Sr high #7431 with 51 votes and only 6 ballots

Why was there 485 extra votes and  
not 365?

Under votes

# What are Under Votes?

- When I first started to count the votes, I noticed a significant number of schools with less votes for President than the number of ballots. For example 13 votes and 14 ballots.
- The question one has to ask themselves, is why vote if your not voting for the most important positions?
- There were 120 under votes, the worst location was South Dade Middle with 31 ballots but only 9 votes???

# VP election

- There were 7505 votes “cast” for VP.
- There were **493 Over votes** at 52 schools
- There were **225 Under votes** at 110 schools

# Treasurer

To put it simply....

**They ran out of time!!!**

# Treasurer

- There were 7191 votes for Treasurer
- There were **455 Over votes**
- There was a ridiculous **501 Under votes**
- There were 4 schools that did not list a **single vote for treasurer.** They were schools #71, #2521, #6631, and #6231.

# Treasurer

- Out of 156 ballots not a single person voted for treasurer?

Notice anything similar?

What are the odds two schools next to each other have the exact number of votes per candidate ?
